This is the UX equivalent of code refactoring. Real validation of the work requires that the team test the product with users in their own work context, working through examples of User-Centered Agile Methods own work tasks 9. Again, all team members should be involved in deciding on the output of each UCD activity and translating insights into realistic, actionable tasks.

Gothelf, J. A world wide response of 92 practitioners was received. Scrum masters, or project managers, are necessary to help run the project. We provide an overview of Contextual Design CDA user-centered design process co-developed by the author which supports User-Centered Agile Methods range of activities, and show how user-centered design integrates with agile development. Purchase print or personal eBook. Realistically, it is very hard to do all this within an already-short sprint without making the iteration too short to do useful work. Nevertheless, the strength of this combination does not make it right for all projects.
